Visionary Digital Recorder Digital Court Recording Software

The **Visionary Digital Recorder (VDR)** has the right tools to digitally record any important event. This software is specially designed for court reporting agencies, independent deposition reporters or anyone offering reporting services. With the VDR you can offer immediate delivery of searchable content onsite.

The **VDR** supports multiple audio channels, from 2-channel to 16-channel, providing the ability to record multiple people talking simultaneously and transcribe each channel separately. Each channel has its own volume control, making transcription easy and efficient. This ensures that you capture *every* word that is spoken.

While recording the proceedings, the digital technician can enter notes in the intuitive interface. Now playing back any portion of the event is as easy as search, point, click and play. Additionally, the day's work can be backed up simultaneously to an external drive to guard against accidental loss.

When you digitally record depositions, hearings, council meetings or any other event, you preserve the speakers' words in their own voices which is perfect for those who want to capture a complete, high-quality digital audio record that can be easily transcribed and stored.

Learning how to use the **VDR** is fast and easy. We have the solution for every level of experience.

Call us today to see why court reporters trust the VDR to digitally record proceedings.
